

I urge the FCC not to allow BPL at this time.

There has not been sufficient testing to determine the effects of BPL on other users of the radio spectrum. The limited testing by the American Radio Relay League shows that it may be a serious problem. This could affect people including AM broadcast listeners, shortwave listeners and amateur radio operators, and people in fringe television reception areas. The latter would be a particular concern, as they are also the least likely to have a cable TV alternative.

Delaying BPL deployment until it has been determined that interference will not be a problem or can be solved is prudent.

Sincerely,

Paul Young
